AS 60311—1999 IEC 60311:1997

Australian Standard[™]

Electric irons for household or similar use—Methods for measuring performance

This Australian Standard was prepared by Committee EL/15, Quality and Performance of Household Electrical Appliances. It was approved on behalf of the Council of Standards Australia on 28 June 1999 and published on 5 September 1999.

The following interests are represented on Committee EL/15:

Australian Association of Certification Bodies

Australian Consumers Association

Australian Electrical and Electronic Manufacturers Association

Australian Retailers Association

Consumer Electronics Suppliers Association, Australia

Department of Energy, N.S.W.

Department of Mines and Energy, Qld

Electrical Compliance Testing Association

Energy Efficiency and Conservation Authority of New Zealand

Metal Trades Industry Association of Australia

National Appliance and Equipment Energy Efficiency Committee, Australia

New Zealand Manufacturers Federation

Office of the Chief Electrical Inspector, Vic.

Office of Energy Policy South Australia

Testing interests

This Standard was issued in draft form for comment as DR 97454.

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australian Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

AS 60311-1999

Australian Standard[™]

Electric irons for household or similar use—Methods for measuring performance

Originated as AS 1805—1975. Revised and redesignated AS 60311—1999.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee EL/15, Quality and Performance of Household Electrical Appliances, and is the result of a consensus among the representatives on the Joint Committee that it be produced as an Australian Standard.

This Standard is identical to IEC 60311:1997, *Electric irons for household or similar use— Methods for measuring performance*. (IEC 60311:1997 is a consolidation of the third edition of IEC 60311 published in 1995, and its Amendment 1 (1997). IEC 60311:1997 bears the edition number 3.1.) This Standard has been reproduced from IEC 60311:1997 and varied as indicated to take account of Australian conditions.

Variations to IEC 60311:1997 are indicated at the appropriate places throughout this Standard. Strikethrough (example) identifies IEC tables, figures and passages of text which, for the purposes of this Australian Standard, are deleted. Where Australian tables, figures or passages of text are added, each is set in its proper place and identified by shading (example). Added figures are not themselves shaded, but are identified by a shaded border.

Those parts of IEC 60311:1997 affected by IEC 60311:1997 Amendment 2:1999-02 are identified by a vertical line in the right-hand margin.

A reference to an International Standard identified in the Normative References Clause by strikethrough (example) is replaced by a reference to the Australian or Australian/New Zealand Standard(s) listed immediately thereafter and identified by shading (example). Where the struck-through referenced document and the referenced Australian or Australian/New Zealand Standard are identical, this is indicated in parenthesis after the title of the latter.

In January 1997, the IEC commenced numbering its Standards from 60000 by adding 60000 to the number of each existing Standard. This coordinates IEC numbering with ISO numbering. During the transition period an IEC Standard might be identified by its new number or its old number (for example, IEC 60050 or IEC 50).

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text 'this standard' should read 'this Australian Standard'.
- (c) A full point should be substituted for a comma when referring to a decimal marker.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the annex to which they apply. A normative annex is an integral part of a Standard, whereas an informative annex is only for information and guidance.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

[©] Copyright - STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.
