## Preface

This Standard was prepared by the Standards Australia Committee CS-101, Sports and recreational facilities and equipment.

The objective of this document is to specify requirements for parkour equipment for use mainly by users starting from 8 years of age.

This document also specifies requirements for the installation and maintenance of parkour equipment, including area, height, flow, location and separation from other facilities, including children's playgrounds and multi-use games areas (free access multi-sports equipment).

This document is only applicable to parkour equipment, installation and maintenance, but not for example to parkour activities.

This document is identical with, and has been reproduced from, EN 16899:2016, *Sports and recreational equipment — Parkour equipment — Safety requirements and test methods*.

As this document has been reproduced from an International Standard, the following applies:

- (a) In the source text “this European Standard” should read “this document”.
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

## NOTES
